AI SYSTEMS · DELIVERED IN 48 HOURS

dejanswat@gmail.com · Belgrade, Serbia (CET)
Remote · async only · CET → EST overlap 4h
github.com/dejanswat-sketch · code on request

I build and run the boring, load-bearing parts of AI products: **intake, qualification, retries, dead-letter queues, compliance and audit** — the parts that decide whether it is still working on Monday morning.
One flow, hardened, with a test that proves it — in 48 hours.

WHAT I DELIVER

- One hardened flow: `webhook → Postgres → AI → SMS/email`, with retry, DLQ, opt-out and quiet hours.
- Code, schema, tests, docs and a 2-minute Loom of it actually running.
- An agent pipeline that writes the spec and cites the rule behind every decision.

HOW I WORK

- Async only. No standups, no calls unless you want one.
- Scope is written before I start; anything outside it is priced, not smuggled in.
- You keep the code and the IP.

THREE PROOFS

Lead intake service
Idempotent webhook, outbox with retry `1s/5s/25s/125s`, dead-letter queue with replay, opt-out and quiet hours per recipient timezone. **26 tests green** on a fresh database; measured `200 rps, p95 16 ms` on one node.

Spec swarm
Five stages — architect, historian, saboteur, builder, scoper. Every ADR cites a rule and the incident that paid for it: `[R01 + C1]`. If the model ignores history, the job stops and waits for a human (`needs_human`). **50 real incidents** in memory.

Command center
12 working modules over the same engine: pipeline, analyser, swarm, ROI calculator, proposal studio, delivery. **5/5 end-to-end runs green**, zero console errors, live numbers from Postgres — not mockups.

PRICE

48H PILOT
$249
One flow, hardened. Code, tests, docs, Loom. Money back if the written outcome is not met in 48h.

RETAINER
By agreement
20 h/week async, one active build at a time, 08:00 written report, unused days refunded pro rata.

WHAT A PILOT LOOKS LIKE

DAY 0 · 30 MIN, ASYNC
You send the flow you hate doing by hand. I reply with a written outcome: input, output, success criteria, price.

DAY 1–2
Build with tests. You get progress notes, not questions. If something is unclear I ask once, in writing.

DELIVERY
Code, schema, docs, 2-minute Loom of it running, 14 days of fixes. You run it yourself.

GUARANTEE — the pilot outcome is written down before I start: input, output, success criteria. If I miss it, you get the money back, and the code stays with you. No hourly billing, no surprise invoices.

`START: send one flow you hate doing by hand. I reply with a fixed scope and a start time.`
